

T-cyte

Treat them like family.

Get LTCI for your cat for the treatment of FIV/FeLV.

Cat Owners

Please print out and provide this sheet to your veterinarian. LTCI is available only to licensed veterinarians in the United States from T-Cyte Therapeutics. You may also visit us at www.tcyte.com/vets-using-ltci to find veterinarians located nearby that currently use LTCI.

Veterinarians

LTCI is a potent regulator of CD-4 lymphocyte production and function. It has been shown to increase lymphocyte numbers and IL-2 production.

Lymphocyte T-Cell Immunomodulator is intended as an aid in the treatment of cats infected with feline leukemia virus (FeLV) and/or feline immunodeficiency virus (FIV), and the associated symptoms of lymphopenia, opportunistic infection, anemia, granulocytopenia, or thrombocytopenia.

Lymphocyte T-Cell Immunomodulator (LTCI)

LTCI is supplied in 3-dose or 10-dose packs. LTCI is administered by subcutaneous injection upon diagnosis of the presence of FIV or FeLV disease. For the first month LTCI is typically administered at days 0, 7 and 14, then can usually be given monthly or bi-monthly as necessary depending on the patient's response.

How to Order:

LTCI may be ordered from T-Cyte Therapeutics by a licensed veterinarian online at www.tcyte.com/order or by calling (800) 483-2104, ext. 87.

Outside the United States:

LTCI may be shipped internationally. Veterinarians seeking to purchase LTCI should first check with their local regulatory officials for any import requirements.

T-cyte

Lymphocyte T-Cell Immunomodulator (LTCI) has received a conditional license from the United States Department of Agriculture. Additional efficacy and potency studies are in progress. LTCI is manufactured and distributed exclusively by T-Cyte Therapeutics, Inc.
