

Treating FIV/FeLV: Get LTCl for your Cat.

Lymphocyte T-Cell Immunomodulator (LTCl)

For Cat Owners: Please print this out and provide this sheet to your veterinarian. LTCl is available to licensed veterinarians in the United States from T-Cyte Therapeutics.. You may also visit www.Tcyte.com to find local veterinarians that currently use LTCl. THE ORDER FORM IS ATTACHED.

For Veterinarians: LTCl is a potent regulator of CD-4 lymphocyte production and function. It has been shown to increase lymphocyte numbers and IL-2 production. Lymphocyte T-Cell Immune Modulator is intended as an aid in the treatment of cats infected with feline leukemia virus (FeLV) and/or feline immunodeficiency virus (FIV), and the associated symptoms of lymphopenia, opportunistic infection, anemia, granulocytopenia, or thrombocytopenia.

How to Order: LTCl may be ordered from T-Cyte Therapeutics. By a licensed veterinarian via FAX 951 346-5575, email to info@tcyte.com, or over the phone **800 483-2107 x87**.

Outside of United States: LTCl may be shipped internationally. Veterinarians or distributors seeking to purchase LTCl should first check with their local regulatory officials to make sure about any import requirements.

How Supplied: This product license is conditional. Additional efficacy and potency test studies are in progress. LTCl is supplied in 3-dose or 10-dose packs. LTCl is administered by subcutaneous injection upon diagnosis of the presence of FIV or FeLV disease. LTCl may be given weekly for the first month, then every other week for second month, then monthly or as necessary thereafter depending on the patient's response.
